

What is the Scope of the Water Study Proposed in Article 21?

While the actual scope of work to be completed in the proposed Water Study has not been defined in detail, nor has the firm to perform the study been chosen, the Windham Economic Development Committee has a general outline of the scope of the Water Study.

The major objective is to evaluate the feasibility of supplying public water to the general area along Route 111 through Windham. This is an area which has been identified as an area of future commercial development. More than one alternative for supplying public water will be researched.

Information and data pertaining to the water supply, treatment, storage and distribution systems of the alternative sources will be collected, including: mapping; current water demand data; safe yield of the alternative water supply sources; and capacity information relative to treatment and storage facilities. The cost and potential benefit of a municipal supply will also be studied.
