

Town of Windham, NH

**Broadband Technology
 with Maximum Advertised
 Download Speed**

This map displays broadband availability based on data submitted to the NH Broadband Mapping & Planning Program as of **September 2014**.

**Technology Delivering Maximum
 Advertised Download Speed**

- DSL
- Cable
- Terrestrial Fixed Wireless
- Terrestrial Mobil Wireless
- Optical Carrier/Fiber To The End User
- Other (T-1, etc.)

Map Notes:

The federal guidelines for this project define broadband as access that is at least **768 kbps downstream** and **200 kbps upstream**.

Service providers submitted data to the NH Broadband Mapping & Planning Program (NHBMP) in a range of geographies, including addresses, road segments, census blocks, census tracts, etc. For mapping purposes, all data are aggregated and displayed at the census block level. A census block is mapped as "served" if service is delivered to any part of the block.

In some cases, two or more broadband technologies had the same maximum advertised download speed for a given census block. When this occurred, the technology assigned was consistent with the order displayed in the legend (i.e. where DSL and Cable had the same advertised speed, DSL was assigned). Note also that satellite internet is excluded from this analysis and display.

The GRANIT System at the University of New Hampshire is responsible for the management of the inventory and conducts updates to these data every 6 months.
